Profile

I have always been in love with space, the sky, and its stars. When I wanted to choose a field of study, I wanted to study aerospace engineering, but well, it's not that feasible for a woman. At that exact moment, the news about the James Webb Telescope exploded, and I found out that a significant part of this project was written in JavaScript. I became intrigued and started studying this language. I saw that not only does it have a good job market in the aerospace sector, but it can also be used to develop cool websites. This is exactly where my learning journey and career choice started, and I began learning and striving every day to keep myself updated, maintain my enthusiasm, and keep my determination as strong as the first day.

Professional Experience

React.js

internship in kelassor

I participated as an intern in the Kelassor's boot camp. In this Bootcamp, we learned React and CSS libraries like MUI and tailwind and styled-component and techniques for better coding. We learned teamwork. We learned the correct way to search and, most importantly, Mr. Nasiri shared detailed points about coding and the potential issues we may encounter with us. In each session, projects were assigned that were discussed and debated.

Angular

internship in Data Processing Iran CO.

I completed an internship at a company where I utilized my strong JavaScript skills in the front-end department, working with the Angular framework. I contributed to a real project focused on tax management, employing TypeScript and learning to use Swagger for API documentation and testing. This experience enhanced my technical abilities and reinforced my understanding of collaborative software development practices.

Projects

Personal Portfolio 📄

this website contains all the essential information about my background, skills and experience

CALCULATOR 📄

REACT.js and tailwind

the biggest challenge i faced was link the keyboard and buttons together without the ASCII characters.

WEATHER APP 📄

REACT.js and CSS and MUI(dark mode) and fetch API (openweathermap.org)

the challenge i faced was use a dark mode component, cause i must style each component one by one and link to this component.

EXCHANGE CURRENCY 📄

react.js-CSS-fetch Api

you can exchange your currency in one moment.

QUIZ APP 📄

REACT.JS-CSS-tailwind-fetch Api

I came across a challenge to randomize the range of questions and correct calculations in the exam result section.
